## Robust Timber Framed Terrace Cover

The Mediterranea is a terrace cover which has a fixed framework with an automated retractable roof. When tensioned the roof creates a flat surface that guarantees the discharge of rain water and then retracts, concertina style, at the touch of a button. A fixed cover panel at the rear helps protect the fabric from the elements.

The Mediterranea provides shelter from the rain and shading from the sun's rays but can be fully retracted if desired to enable you to take full advantage of the good weather.

It provides a sense of air, light and open space during time spent in the garden or on the terrace allowing you to capitalize on the available open space regardless of size. No other retractable terrace cover offers the versatility of the Med.

- Available up to a width of 11.8m at a 7m projection.
- High quality PVC fabric designed and manufactured for the use on external structures. All fabrics are waterproof, fire retardant and of a structural strength to keep its shape for years to come.
- The timber structure is lamellar pine which is imbued by copper baron salts which protect the wood from the elements. The lamellar pine wood offers increased stability, resistance and provides high bearing capacity in comparison to solid wood, which is known to twist, curve, and split.
- The cover can be manufactured with specific PVC dimming fabrics, for total protection against the sun and rain.
- Optional side blinds allow the flexibility to create a totally enclosed environment.
- Drip catchers seals to prevent water seeping laterally over the cover edge.

# Operation

Manual operation via gear box (1 module only)

Electric Somfy tubular motor housed within the cassette, with wall mounted rocker switch control.

Or

Somfy remote controlled tubular motor housed within the optional cassette barrel which comes with a neat contemporary handset.

# Specification

- Awning with wall mounted and ground fixed side channels specifically designed as a self supporting terrace cover
- The timber structure is available in a choice 6 colour finishes
- Wind resistance: class 3 (110NM = 50KM) equivalent to grade 6-7 on the Beaufort scale. Many sizes tested to Beaufort 10
- Maximum available dimension,  
1 module - 5.5m x 7m, 2 Module - 9m x 7m,  
3 Module - 11.8m x 7m
- In order to provide adequate water drainage it is recommended that the Mediterranean is mounted with a minimum angle of 8 degrees
- Three fabric ranges including block out fabric providing over 30 fabric references to chose from
- Frontal gutter to collect water discharged from cover, with drain integrated in leg and water outlet within floor fixing bracket

# Options

- Stack protection roof (required when fabric stack is not under cover) in either aluminium or transparent PMMA
- Fixed apex blinds to fill triangle between angle of roof and optional cross member
- Drop down side blinds, for front of system and sides, to give a complete room feel with flexibility to raise at the press of a button
- Goal post can be used to install systems back to back
- Lower acrylic cloth can be used to dress the under side of the roof.
